SUMMARY

AI Engineer and cybersecurity-focused developer specializing in agentic AI systems, LLM integration, and secure backend infrastructure. Experienced building production-grade multi-agent workflows (LangChain/LangGraph), AI-driven security automation, and full-stack applications spanning FastAPI, Flutter, and cloud-native tooling. Combines hands-on penetration-testing and SOC background with applied machine learning to build scalable, cost-efficient AI-driven solutions for compliance, threat detection, and automation.

SKILLS

AI & ML	LLMs, AI Agents (LangChain, LangGraph), NLP, Audio AI, Prompt Engineering, Anomaly Detection (SVM, Isolation Forest)
Backend	Python, FastAPI, Flask, REST APIs, MySQL, PostgreSQL, pgvector
Cybersecurity	OSINT, API Security, Cryptography, Linux, SOC Concepts, Behavioral Sandboxing (gVisor)
Cloud & Tools	Docker, Firebase, MongoDB Atlas, Git, Postman, n8n
Languages	Python, C++, Dart, JavaScript, SQL, HTML

EXPERIENCE

AI Engineer (Agentic Workflows) Intern — Algilityx 2026 · 2 Months

AI Security / Agentic Systems / Backend

- Engineered the real-time multi-agent architecture for the Virtual Data Protection Officer (VDPO) framework, an AI-native compliance automation platform.
- Rebuilt the VDPO agent from the team's existing non-agentic pattern into a proper agentic workflow using LangChain and LangGraph.
- Delivered a full working AI security agent on FastAPI with PostgreSQL + pgvector, supporting GDPR and Saudi PDPL/SDAIA compliance workflows (DSAR, DPIA, breach response, consent, vendor risk).
- Prioritized cost-efficient LLM usage and lean, non-over-engineered system design across the agent pipeline.

AI-Driven Cybersecurity Engineer Intern — Pro Tech Lab 2026

AI Security / Automation / Backend Systems

- Worked on AI-assisted cybersecurity workflows and intelligent automation systems.
- Developed and contributed to AI-powered phishing domain detection systems.
- Assisted in API testing, threat analysis, and backend security operations.
- Explored AI integration for security monitoring and automated analysis pipelines.
- Collaborated on cybersecurity simulation and research-oriented tasks.

Vice President — FAST Computing Society 2025

Leadership / Management / Coordination

- Led technical event management, development-focused workshops, and society operations.
- Coordinated teams, speakers, sponsorship communication, and execution planning.
- Contributed to organizing AI, cybersecurity, and software engineering related activities.

Vice President Services — NASCON '25 — FAST University's Flagship Tech Event 2025

Operations / Leadership / Execution

- Managed operational logistics and execution workflows for one of Pakistan's largest student-led technology events.
- Coordinated vendors, technical teams, event operations, and large-scale execution management.
- Assisted in planning and managing high-volume event activities and technical competitions.

PROJECTS

Laiyana AI Assistant — *Flutter, FastAPI, PostgreSQL, LangGraph, Grok API — Flagship Project*

- Building a production-grade personal AI assistant (Flutter app for Android & Windows) with a FastAPI backend, PostgreSQL + pgvector, Redis/Celery, and LangGraph-based agent orchestration.
- Shipped full auth (JWT/OAuth2), multi-conversation chat, and real-time WebSocket messaging on a layered service/repository architecture with automated test coverage.
- Delivered a complete conversation engine powered by the Grok API and is now building out the LangGraph Planner Engine.

ModelCage — *Python, Docker, gVisor, One-Class SVM / Isolation Forest*

- Designed a dynamic behavioral sandbox that safely executes untrusted ML models inside gVisor-isolated containers to detect malicious models in real time.
- Built a three-layer detection pipeline — static inspection, dynamic syscall-trace monitoring, and network/IP-port traffic analysis — feeding a unified risk-scoring engine.
- Benchmarked One-Class SVM against Isolation Forest for behavioral anomaly detection, based on the DynaHug behavioral-analysis technique.

Phishing Domain Detection Platform — *React, FastAPI, ML Security*

- Developed a full-stack AI-driven phishing detection platform that analyzes suspicious URLs and identifies phishing indicators using machine learning and intelligent backend workflows.

Dog Behavior Analysis Model — *Python, ML Behavior Analysis*

- Developed a machine-learning-based behavioral analysis system for detecting and classifying dog behavior patterns from structured datasets.

Audio Intelligence System — *Python, Audio AI*

- Built an AI-powered audio analysis and classification system for processing sound patterns and extracting contextual information intelligently.

Smart Gmail Filter & Notifier — *Python, Gmail API*

- Built an intelligent email classification and notification system using Gmail API integration and AI-based priority filtering.

Secure Chat System — *Python, Cryptography*

- Developed an encrypted client-server chat application implementing RSA encryption and Diffie-Hellman key exchange.

Stationary Hub Web Application — *Flask, MySQL*

- Developed a full-stack inventory and sales management web application using Flask and MySQL.

EDUCATION

BS Cyber Security — FAST-NUCES, Islamabad

Expected Graduation: June 2027

Relevant Coursework: Artificial Intelligence, Intelligent Systems, Data Structures, Algorithms, Machine Learning, Cryptography, Software Engineering, Networking.

CERTIFICATIONS

- Cyber Security Professional Certificate — Google (2023): security operations, networking, system defense, and security fundamentals.
- Web Development Course — eHunar (2023): backend systems, databases, frontend integration, and web application development.
