faisal-yaseen

SUMMARY

AI Engineer and cybersecurity-focused developer with experience building intelligent automation systems, AI-powered applications, backend infrastructures, and security-oriented platforms. Skilled in large language model integration, AI agents, automation pipelines, back-end APIs, and intelligent data processing systems. Passionate about developing scalable AI-driven solutions combining machine learning, cybersecurity, and automation into real-world applications.

SKILLS

- AI & ML:** LLMs, AI Agents, NLP, Audio AI, Prompt Engineering
- Backend:** Python, FastAPI, Flask, REST APIs, MySQL
- Cybersecurity:** OSINT, API Security, Cryptography, Linux, SOC Concepts
- Cloud & Tools:** Docker, Firebase, MongoDB Atlas, Git, Postman, n8n
- Languages:** Python, C++, Dart, JavaScript, SQL, HTML

PROJECTS

- Sentinel AI** github.com/faisalyaseen00
Built with Flutter, AI Agents and MongoDB. AI-powered personal assistant mobile application with automated backend workflows, persistent memory architecture, intelligent intent classification, voice support, and Firebase authentication integration.
- Phishing Domain Detection Platform** github.com/faisalyaseen00
Built with React, FastAPI and ML Security. Developed a full-stack AI-driven phishing detection platform capable of analyzing suspicious URLs and identifying phishing indicators using machine learning and intelligent backend workflows.
- SentinelX Threat Simulation System** github.com/faisalyaseen00
Built with Python and AI Security tools. Designed an AI-driven cybersecurity simulation platform focused on automated threat detection, incident simulation, and intelligent security workflow automation.
- Dog Behavior Analysis Model** github.com/faisalyaseen00
Built with Python and ML Behavior analysis. Developed a machine learning-based behavioral analysis system for detecting and classifying dog behavior patterns using structured datasets.
- Audio Intelligence System** github.com/faisalyaseen00
Built with Python and Audio AI. Built an AI-powered audio analysis and classification system capable of processing sound patterns and extracting contextual information intelligently.
- Smart Gmail Filter & Notifier** github.com/faisalyaseen00
Built with Python and Gmail API. Built an intelligent email classification and notification system using Gmail API integration and AI-based priority filtering.
- Secure Chat System** github.com/faisalyaseen00
Built with Python and Cryptography. Developed an encrypted client-server chat application implementing RSA encryption and Diffie-Hellman key exchange.
- Stationary Hub Web Application** github.com/faisalyaseen00
Built with Flask and MySQL. Developed a full-stack inventory and sales management web application using Flask and MySQL.

EDUCATION

- Ongoing

BS Cyber Security [FAST-NUCES, Islamabad](#)
Relevant Coursework: Artificial Intelligence, Intelligent Systems, Data Structures, Algorithms, Machine Learning, Cryptography, Software Engineering, Networking
- 2023

Cyber Security Professional Certificate [Google](#)
Completed intensive cybersecurity training focused on security operations, networking, system defense, and security fundamentals.
- 2023

Web Development Course [eHunar](#)
Completed full-stack web development training focused on backend systems, databases, frontend integration, and web application development.

EXPERIENCE

2026	AI-Driven Cybersecurity Engineer Intern Pro Tech Lab • Worked on AI-assisted cybersecurity workflows and intelligent automation systems. • Developed and contributed to AI-powered phishing domain detection systems. • Assisted in API testing, threat analysis, and backend security operations. • Explored AI integration for security monitoring and automated analysis pipelines. • Collaborated on cybersecurity simulation and research-oriented tasks. AI Security / Automation / Backend Systems
2025	Vice President FAST Computing Society • Led technical event management, development-focused workshops, and society operations. • Coordinated teams, speakers, sponsorship communication, and execution planning. • Contributed to organizing AI, cybersecurity, and software engineering related activities. Leadership / Management / Coordination
2025	Vice President — Logistics NASCON 25 — FAST University's Flagship Tech Event • Managed operational logistics and execution workflows for one of Pakistan's largest student-led technology events. • Coordinated vendors, technical teams, event operations, and large-scale execution management. • Assisted in planning and managing high-volume event activities and technical competitions. Operations / Leadership / Execution
2023 – 2024	Vice Head — Information FAST Community Service Society • Led communication management, outreach coordination, and information dissemination activities. Communication / Outreach
